

TAM 204

Characteristics

Beardless

High Grain Yield

Excellent Forage Production

Excellent Stalk Strength

Disease & Insects

Wheat Streak Mosaic Resistant

Curl Mite Resistant

Soil Born Mosaic Resistant

Green Bug Resistant

Hessian Fly Resistant

Stripe Rust Resistant

Acid Soil Tolerant

TAM 204

Tam 204 is a medium maturity, semi dwarf that is considered to be awnless. The parentage of TAM 204 includes the popular drought-tolerant TAM 112 and Jagger, which was well known for excellent fall grazing. Even though it is a beardless wheat, it has the similar yield potential as TAM 111 or TAM 112. TAM 204 is for a dual purpose or a grain only system.
