

TAM 305

SCOTT
SEED CO.

Characteristics

Test Weight: 60 lbs

Seeds per pound: 14,500-16,000 Early Vigor:
Excellent

Maturity: Early-Medium Early Uniformity:
Good

Test Weight: Good

Resistance to Leaf Rust: Excellent Resistance to
Stem Rust: Excellent Excellent Tillening

Planting Rates:

Dryland 40-50 lbs/ac

Irrigated 100/120 lbs/ac

TAM 305

Tam 305 is an awned semi-dwarf wheat. It is adapted to all wheat growing areas in Texas. Tam 305 is a medium-late maturing wheat with excellent yield potential, short stature, strong straw and resistance to shattering. It is resistant to leaf rust and has a resistance to the most prevalent stem rust (TPMK). Tam 305 has a great yield record across a wide range of environments, but is particularly well suited for irrigation. It also has great baking and milling qualities.

Tam 305 has great results in winter wheat grazing programs. With strong vigor and a wide leaf width, producers can expect earlier grazing and higher forage production than most pasture varieties.

Tam 305 is a Plant Variety Protected Wheat under Scott Seed Co. Hereford Texas, License# L-1197, and is available at:
